Fire Safety Warning – Use of Booster Chargers & Non-Certified Cables Notice**

Dear Residents,

We write as the strata managing agent for the abovementioned property on behalf of the strata committee in relation to a **recent fire incident onsite involving a booster charger**.

A small fire occurred within the building caused by a device being charged using a booster-type charger. Thankfully, the fire was contained quickly, however the incident highlights an important safety risk.

To ensure the safety of all residents and the protection of common property, we remind all owners and occupants of the following:

Fire Safety – Charging Devices

- **Only use certified charging cables and power adaptors** that comply with Australian safety standards.
- **Do not leave devices on “fast charge” unattended**, particularly for extended periods.
- **Avoid charging devices on soft or flammable surfaces**, such as beds, sofas, carpets, or under pillows.
- Ensure adequate ventilation around charging devices.
- Replace any damaged or frayed cables immediately.
-

Charging devices improperly or using non-certified equipment can significantly increase the risk of fire, endangering both personal safety and property.

We appreciate your cooperation in helping maintain a safe living environment for everyone in the building.

Should you have any further questions in relation to the above, please do not hesitate to contact me at aryan.soleymani@waratahstrata.com.au or on **02 9846 1671**.

Warm regards,

Aryan Soleymani
